

# **WEB-BASED CLASS SCHEDULING SYSTEMS FOR PAMPANGA STATE UNIVERSITY, MEXICO CAMPUS**

## **Introduction**

Managing class schedules in schools and universities can be difficult, particularly when done manually with papers or spreadsheets. These traditional approaches frequently result in problems such as overlapping classes, incorrect room allocations, and miscommunication between students and teachers. As the number of subjects, instructors, and classrooms grows, the scheduling procedure gets more complex and time-consuming.

To overcome these challenges, a Web-Based Class Scheduling System provides a effective and dependable alternative. It enables administrators to simply create, amend, and organise schedules, while students and teachers have instant online access to the most recent information. Moving to a digital approach makes scheduling faster, clearer, and less stressful, allowing the entire school community to keep organised and informed.

## **Project Context**

At Pampanga State University – Mexico Campus, a large number of classes, teachers, and classrooms must be managed daily. Manually organizing these schedules can be time-consuming and prone to errors, especially as the campus continues to grow. The proposed Web-Based Class Scheduling System offers a digital platform where schedules can be created, updated, and viewed with ease.

This system helps administrators by simplifying and speeding up the scheduling process. It enables teachers to clearly see their assigned classes and allows students to conveniently check their schedules anytime. By reducing manual workload and minimizing scheduling conflicts, the system enhances overall efficiency and supports smoother academic operations. As a result, the university can achieve more accurate and organized academic planning for the entire institution.

## **Statement of Objectives**

### **General Objective**

The Web-Based Class Scheduling System aims to improve academic schedule administration at Pampanga State University – Mexico Campus by providing an effective, user-friendly, and well-organized online platform.

### **Specific Objective**

1. Simplify the creation and management of class schedules by using a centralized platform that safely stores class information, room assignments, and teacher availability.

2. Provide students and teachers easy and quick access to class schedules, allowing them to browse updated schedules at any time and from any location.
3. Reduce errors and avoid schedule conflicts by ensuring that teacher workloads, classroom capacity, and time slots are properly monitored.
4. Reduce errors and avoid schedule conflicts by ensuring that teacher workloads, classroom capacity, and time slots are properly monitored.
5. Improve user experience by offering a clear, organized, and easy-to-navigate interface that helps students, teachers, and staff quickly find the schedule information they need.
6. Increase overall efficiency and reduce manual work, helping the school deliver smoother operations, faster scheduling processes, and a better experience for students, teachers, and administrators.
